Features in Skolup

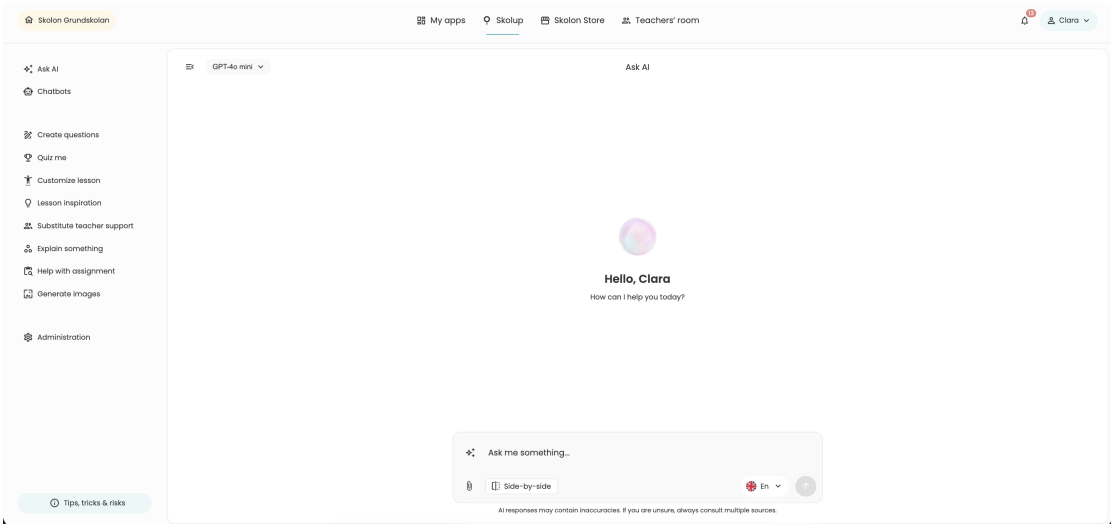
Clara Hardarsson - 2026-11-28 - School Administrator

Welcome to a brand new version of Skolup!

We have developed the tool to make AI even more useful, secure, and integrated into your daily school life. Here, we go through the most important updates and how they work.

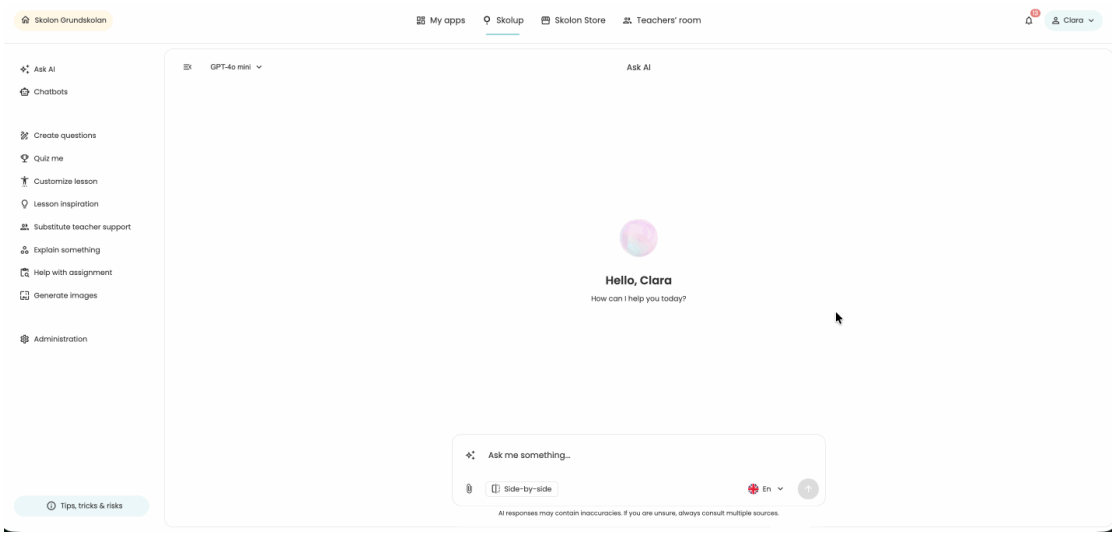
The new Skolup includes the following features:

- Ask AI
- Chatbots
- Create questions
- Quiz me
- Adapt Lesson
- Lesson inspiration
- Substitute support
- Explain something
- Help with assignment
- Generate images



Side by side – Compare language models

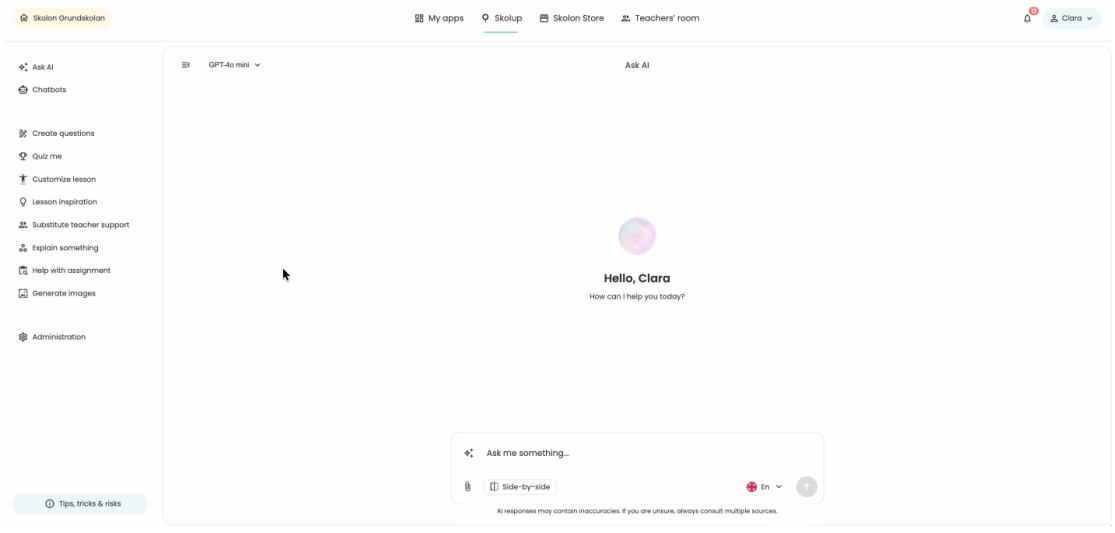
Now you can compare two different language models against each other in real-time. You ask a question and see the answers from both models in the same view. This is a perfect tool for creating interesting discussions and reflections on how different AI models can provide different answers, emphasize different things, or have different "personalities."



Chatbots – Create your own assistants

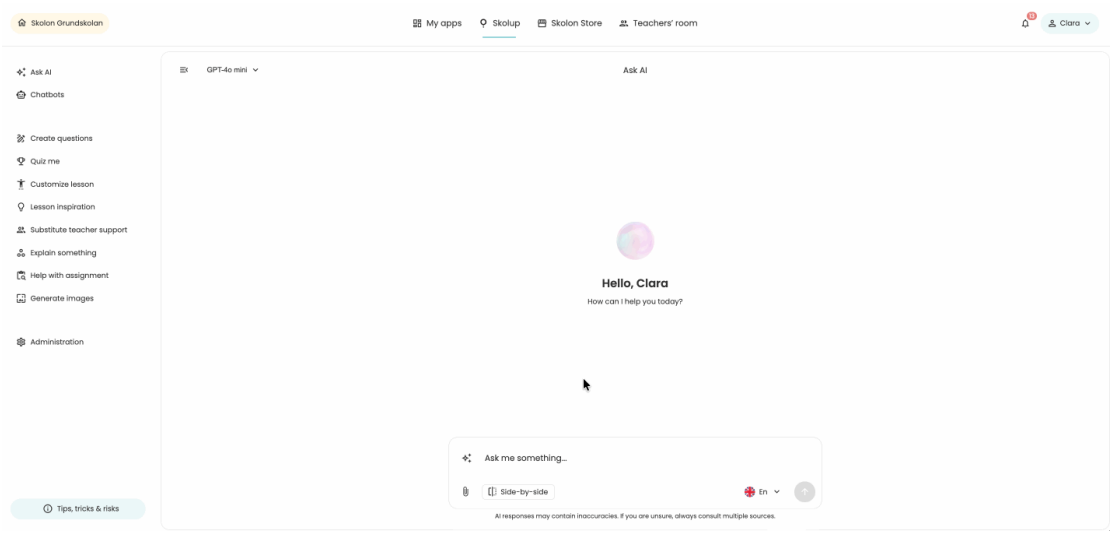
Perhaps our most anticipated feature is here! Now you can build and customize your own chatbots.

- **Instructions:** Give the bot specific instructions on how to respond (e.g., "Answer as an 18th-century historian").
- **Knowledge Base:** Upload or specify the information the bot should use as its basis.
- **Share:** You can save your bots for personal use as well as share them with colleagues and students.



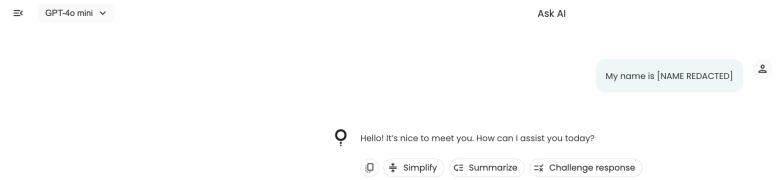
Challenge the Answer – Promote source criticism

Did you get an answer that you feel uncertain about? With the "Challenge the Answer" feature, you can let another language model read through the first response and comment on it. This is an excellent way to train students in a critical approach to AI.



Protection against the spread of personal data

If a user enters personal data into a prompt, we attempt to identify it and prevent that information from being sent to the language model.



Is the new Skolup not yet activated at your school? Contact your organization's administrator.

Do you have questions about how more of the new features work? Don't hesitate to contact Skolon Support, and we'll tell you more!
