

Deeplinks - How it works / How to use deeplinks in Skolon

Noah Kapteijn - 2022-11-21 - My collection

With deep links, you can easily click directly on a link in e.g. a digital "läromedel" and then share the link to students or colleagues so that they can reach a specific page, paragraph or chapter with one click.

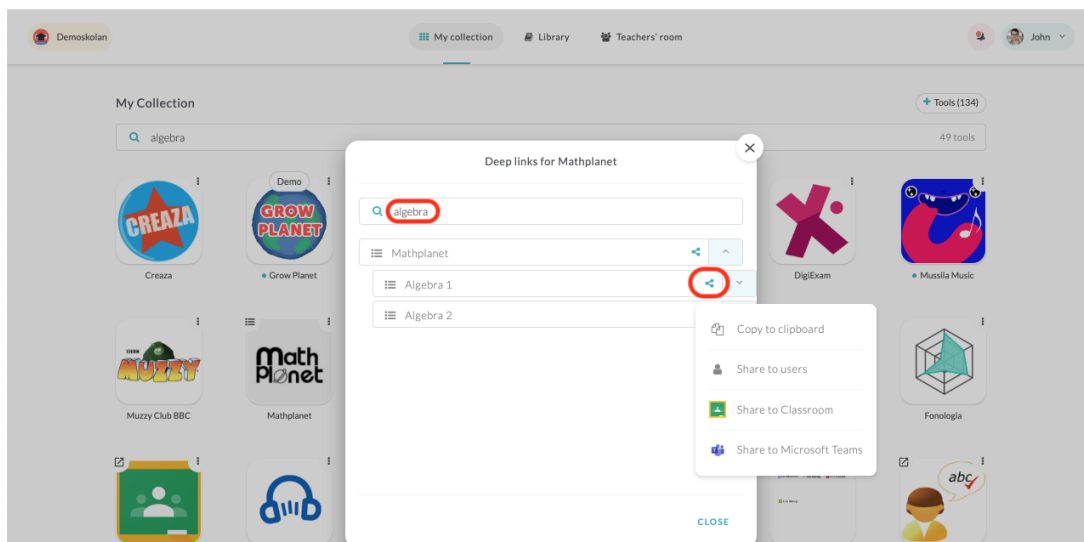

Tools with this addition to their icon  have deep links that allow searching in the tool's content.

If you want to see the contents of a tool with deep links, click on the table of contents icon and you will see a list of chapters and sections.

You can search for specific sections via the search box. Via the down pointing arrows, you can go deeper into the content without opening the tool.

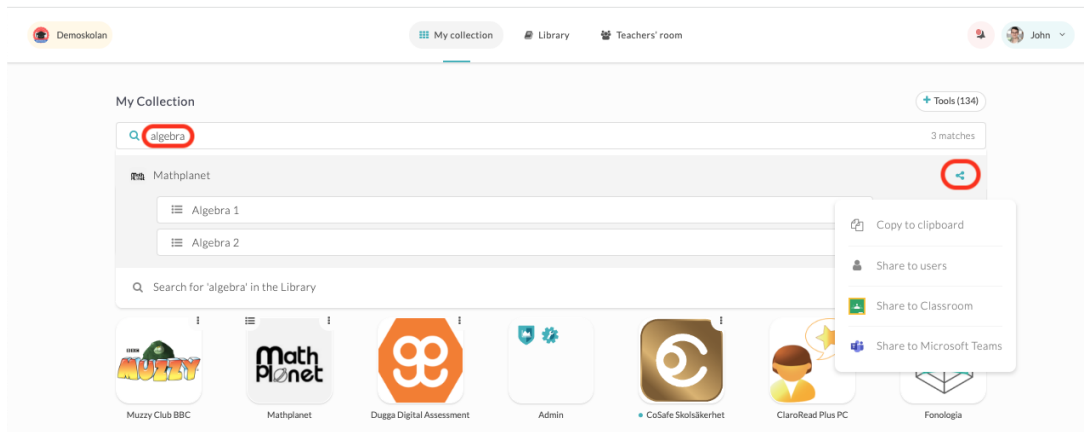

Click on the section you are interested in to open it in the tool. If you find a chapter or section you want to share, click on its share icon.

You can share as follows:

1. Copy to clipboard, which gives you a link that you can paste into e.g. an email.
2. Send to users, in which it sends the link to another user in Skolon. The user gets a notice about it in the eventflow on their Skolon page.
3. If you use Google Classroom or Microsoft Teams you can also share directly to those platforms (Demands that administrator activates this function).

You can also search in **My Collection** and you will get the relevant chapter or section based on your search

Here you can also share the deaplink with colleges or students as follows:

1. Copy to clipboard, which gives you a link that you can paste into e.g. an email.
2. Send to users, in which it sends the link to another user in Skolon. The user gets a notice about it in the eventflow on their Skolon page.
3. If you use Google Classroom or Microsoft Teams you can also share directly to those platforms (Demands that administrator activates this function).
