

Install Skolon ASM integration

Gabriel Wallén - 2025-11-11 - [Apple School Manager](#)

To install Skolons SDS integration to Apple School Manager (ASM), please follow the instructions for "Integrate with your SIS" in Apples article ["Integrate Apple School Manager with your Student Information System \(SIS\)"](#). When selecting sync data source, choose OneRoster API.

You will find the connection credentials for Skolons OneRoster API in the Skolon Data Hub under "OneRoster"

The screenshot shows the Skolon Data Hub interface. On the left, a sidebar lists various sync types: Overview, Syncs, Sync types, OneRoster (which is selected and highlighted in blue), API Sync, Freja eID, Entra, Google, and National exams. The main panel is titled "OneRoster / Skolon - Apple School Manager". It contains tabs for Overview, Schools(1), Connection details (which is selected and highlighted in blue), and Logs. The Connection details section shows fields for Client Id, Client Secret, URL for fetching access token (https://idp.skolon.com/oauth/access_token), and URL for OneRoster API (https://integrations.skolon.com/ims/oneroster/v1p1).

If you are missing an entry for your ASM-configuration, please [contact our support](#) and we'll help you out.

Please note that you will have to activate at least one school and create at least one team in order to proceed with the last steps of the ASM installation guide.

The screenshot shows the Skolon Data Hub interface. The sidebar and main panel structure are identical to the previous screenshot, but the Connection details section now displays a yellow warning box stating "Sync is disabled". Below this, the "Active" section notes that if the sync is active, external integrations such as Microsoft SDS can retrieve data about your organization from Skolon. A note also states that the customer must activate a sync with Claris Connect and enter the connection details under the Connection details tab. The "Apple School Manager" section is also visible.
