Introduction to Skolon Store

Clara Hardarsson - 2026-02-12 - Skolon Store

In the Skolon Store, there's a wide range of digital tools and learning resources from various providers that you can purchase, download free of charge, and try out demo versions of.

You can easily find the Skolon Store directly from My Apps, and as the default setting, both pupils, teachers, and administrators can see Skolon Store. School and organisation administrators can choose to turn off Skolon Store for pupils and teachers. However, our recommendation is to keep Skolon Store open and accessible to all users so that everyone has the opportunity to be inspired and take part in the available selection.

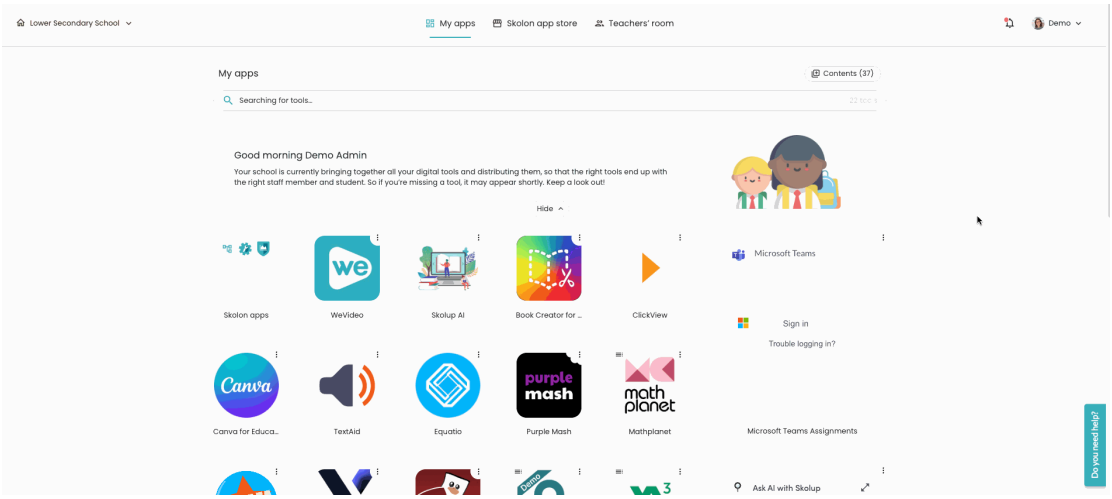

Search and quickly select

In Skolon Store, you can easily search for specific tools, a specific provider, author and ISBN number.

It's possible to use the filter function in Skolon Store to search for specific subjects, tools aimed at a particular year group, or, for example, only show free tools.

There are also direct links to things like news, as well as the tools available from your specific local authority.

Support

In the support articles under the Skolon Store category, you can find all our simple guides and manuals on how to easily add free tools, start demo versions of tools, request tools you'd like to see added to the Skolon Store, and how to add the subjects you teach to create shortcuts in the Skolon Store.

In the support articles under the Purchasing in Skolon category, you can read more about how to easily purchase tools and assign licences directly from the Skolon Store, as well as the permissions required to do so.
