

Skolon Guardians

Ulf Kronsell - 2025-04-22 - My collection

Guardians is an app that makes it easier for you as a guardian to follow and support your child's schooling – directly from your mobile phone. The app is designed to work with schools that use Skolon.

What can I do in Guardians?

With Guardians, you as a guardian get access to a range of digital features connected to your child's school day. The features may vary depending on how the school has chosen to use the app, but include, among other things:

- **Access to the child's digital school tools** See which digital tools and learning materials your child uses via Skolon. *Please note that some providers of digital tools may choose to limit access for guardians, which means that not all tools are visible in the app.*
- **School information** Stay updated with current information from the school.
- **Class list and teacher contacts** See which students are in your child's class and find contact information for the teachers.
- **Assignments in Microsoft Teams and Google Classroom** Get an overview of the child's submissions, homework, and assignments in the platforms used by the school.

Important to know

The features in the app may differ between different schools. It is your school that decides which parts of Guardians are available to you as a guardian. In addition, providers of digital tools can themselves control whether and how their services are shared with guardians, which may affect access in the app.

If you are missing any feature or experience limited access, we recommend that you contact the school administration for more information.
