Skolon Teams SDS Integration

Gabriel Wallén - 2025-06-12 - Microsoft / Entra

Skolons SDS integration for Teams enables automatic and seamless provisioning of Teams based on the MIS-data you have in Skolon. In the Data Hub we provide an interface where admins on organization and school level can choose the classes and groups that is included and synced to Entra and Teams.

The integration is based on Microsoft School Data Sync (SDS) and OneRoster API V2. This means that Skolon will expose users, classes and groups according to the OneRoster standard based on the selection in the Data Hub. Microsoft SDS then pulls the data from Skolon and creates the groups accordingly.

Prerequisites

To install Skolons SDS integration to create Teams, you will need the following in Skolon:

- Users, classes and groups in the Skolon Platform
- Email addresses in Skolon has to be identical to the email addresses used in Entra
- A valid agreement with Skolon that covers the use of the Skolon Teams SDS Integration

To install Skolons SDS integration to create Teams, you will need the following in your Entra environment:

- Microsoft 365 Education tenant
- Global Administrator Permissions
- Global Administrator accessing SDS needs SDS Plan 1 (A1) or SDS Plan 2 (A3 / A5) License

Installation
