SAML2

Linnéa Nyberg - 2022-11-22 - [Login \(IdP\)](#)

Skolon supports SSO via SAML2. For SSO to work, there needs to be a matching attribute both in Skolon and in the SAML2 ticket that is sent to Skolon.

Follow these steps to configure a SAML2 SSO to Skolon:

1. Add our metadata and configure for a SAML2 setup against Skolon with the following information. It may vary between IDP providers on which URL is needed below.

Skolon Metadata: <https://ext-idp.skolon.com/simplesaml/module.php/saml/sp/metadata.php/skolon>

ACS URL: <https://ext-idp.skolon.com/simplesaml/module.php/saml/sp/saml2-acs.php/skolon>

Entity ID: <https://ext-idp.skolon.com/>

2. When you have configured your IDP, send the metadata and the name of the attribute in the SAML ticket that you have agreed on with your Skolon representative.

3. Your Skolon representative configures your IDP SSO in Skolon.

4. Verify that the login is working.
