Manage features in Skolup

Ulf Kronsell - 2026-11-07 - Skolup

The **Features** page allows you, as an organization administrator, to choose which Skolup features will be available in your organization.

Each feature can be toggled on or off. A disabled feature is hidden from all users in the organization.

NOTE: If your organization is new to Skolon and you are just starting to use Skolup, all features are turned off by default.

Check in with your Skolon contact person to configure Skolup and review the features.

The settings affect all users across the organization—both teachers and students.

What can you do?

- View all Skolup features in one place.
- Turn a feature on or off.
- Modify multiple features at once and save them together.

These features can be toggled on or off:

- Conversation history
- Create questions
- Quiz me
- Adapt lessons
- Lesson inspiration
- Substitute teacher support
- Explain something
- Homework help / Help with assignment
- Generate images
- Ask AI is always enabled and cannot be turned off. It is the core feature of Skolup.

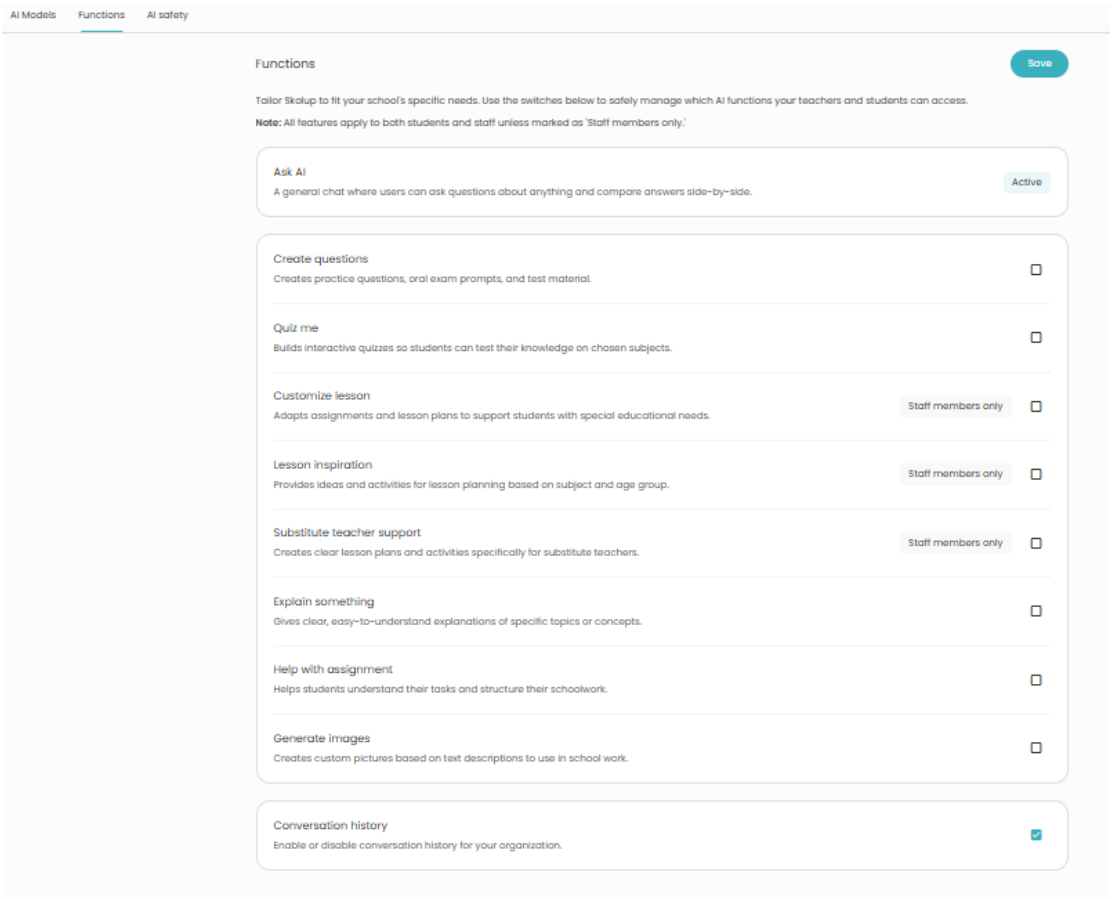

How does it work?

Go to OrgAdmin → Skolup AI → Features.

Check the box for the feature(s) you want to activate.

Click **Save**.

The changes take effect for users immediately.

Default settings

Existing organizations: All features are enabled.

New organizations: All features are disabled.

Good to know

The setting applies to the entire organization. Currently, it cannot be configured per individual school.

A disabled feature is hidden from all users; they will not see it in Skolup.

Regarding conversation history: If you disable this feature, **all** chat history is deleted and cannot be recovered.
